

# Safe Operating Procedures

## K69 Kitchen Stain Remover

Suitable for use in kitchens and food preparation areas.

### Task

Kitchen Stain Removing -  
Crockery & Plasticware

### Chemical

K69 Kitchen Stain Remover -  
Chlorine Based Soaker and Destainer

### Procedure

1. Add warm water to a plastic container large enough to hold the items to be cleaned.
2. Clearly label the container so that other staff are aware of the cleaning process taking place.
3. Add the required amount of K69 as recommended on the product label.
4. Place items to be cleaned into the K69 solution.
5. Allow to soak for 3-4 hours for light stains or overnight or until stains have been removed for heavy stains.
6. Once stains have been removed, remove items and place in dishwasher.
7. If soaking cutlery, take care never to exceed the recommended dose as excess could cause corrosion and rust. K68 Kitchen Stain Remover is better suited to soaking cutlery.

### ⚠ Precautions

- Locate soaking container so that it does not need moving once it is full of cleaning solution and crockery/cutlery.
- Clearly label the soaking container so that other staff members are aware of the cleaning process taking place.
- Always wash hands before and after handling chemicals.
- Wear chemical goggles.
- Maintain adequate ventilation when using.
- Use rubber elbow length gloves and apron.
- Always read SDS & labels before using chemical product.
